

Greenwashing validation: a prompted veneer cannot counterfeit a trained arm

The greenwash persona turns the untrained base into a ~100% defector (AUC 0.973, L0 0.909) but only partially perturbs the trained arms (0.068–0.595, all far below base) → the behavioral score is VENEER-ROBUST: it reads a weight-installed disposition, not a promptable persona. Over-install inversion holds in veneer-resistance too (A3 most robust, A2 least).
